

Lely T4C InHerd – Health Attentions

What is it: Health Attentions task within InHerd-Today combining all available sensors and information on farm to show only the cows which needs the farmers attention.

Check the movie [here](#).

- ✓ Based on the sick score (≥ 10) the cow appears on the list.
- ✓ Recommended is to check all cows which appear on this list.
- ✓ The score is based on all different sensors and information on farm.
- ✓ The more sensors indicate an issue OR the bigger certain deviations the higher the score.
- ✓ This task is default added for the morning and afternoon shift.
- ✓ From farmer experiences it is stated as a very well appreciated complete list with 'all' attention cows on it. No need to check other reports like e.g. udder health. Besides they really like the fact they now use the full potential of their equipment.
- ✓ Used information: Day production deviation, Color, Temperature, Conductivity, SCC, Eating minutes, Rumination minutes, Positive and negative Activity, Time-away, Restfeed, Fat/Protein ratio, Lactation days/stage, Weight
- ✓ Usability score(SUS): 79 point, which is between 'Good' and 'Excellent'

*Scheduled release date: 28th June.
