

Teat-Kote[®] 10/III

Sanitizing Teat Dip with Added Emollients

Teat-Kote 10/III is a 1% (10,000 ppm) pre- and post-milking iodine teat dip, formulated with a 10% emollient system which includes glycerin, lanolin and a special therapeutic ingredient for superior skin conditioning.

Features and Benefits

- **Proven Effective**

Gives added germicidal protection against product contamination and heavy environmental conditions.

- **Exclusive Triple Emollient System**

Contains lanolin, glycerin and a special therapeutic ingredient to promote a natural moisture balance that keeps teats soft and pliable.

- **Thick Formulation**

Ten percent emollient system provides viscosity which helps product adhere to teats for superior mastitis and skin protection.

- **Aids in Decreasing Mastitis**

Thoroughly tested iodine formula provides quick, broad-spectrum kill of bacteria and reduces the chance of new intramammary infections.

- **Dark Brown Color**

Good staining qualities provide visual confirmation that teats have been dipped or sprayed properly.

- **Controlled pH**

Provides kill of bacteria without danger of irritation to cows' teats.

- **Freeze/Thaw Stability**

If frozen, this product can be thawed completely, mixed to its original state and used with confidence.

- **Ready to Use**

No mixing is required.

- **100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

Teat-Kote® 10/III

Sanitizing Teat Dip with Added Emollients

Directions for Use

Use at full strength. Do not dilute.

Indications: Use this topical solution undiluted as a pre- or post-milking teat dip as an aid in reducing the spread of mastitis in dairy cattle.

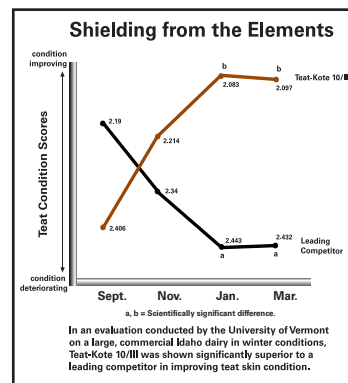

Pre-Dipping: Before milking, dip each teat with Teat-Kote 10/III. After 15 to 30 seconds, dry each teat thoroughly with a single service towel. If the udder and teats are heavily soiled, wash with a sanitizing solution and dry before application of Teat-Kote 10/III.

Post Dipping: Immediately after milking, dip each teat with Teat-Kote 10/III. Allow teats to air dry. Do not wipe. If outside temperature is below freezing, allow to air dry on the teat before the cow leaves the parlor to prevent freezing. At the end of lactation, apply this product daily for one week after the last milking. In addition, begin application of this product about one week prior to calving.

If a common teat dip cup is used for application, a fresh solution should always be used at each milking. The teat dip cup should be emptied, cleaned and rinsed with potable water after each milking session or when dip cup solution becomes contaminated during milking. Do not pour remaining solution from dip cup back into original container.

Research

Teat-Kote 10/III has been extensively tested prior to its introduction into the market. These tests have proven Teat-Kote 10/III to be a safe and effective post-dip product that will aid in the reduction of new intramammary infections.

Product Properties

Appearance: Dark red/brown liquid

Odor: Iodine

pH: 5.3 (as is)

Specific Gravity at 77°F (25°C): 1.05 (water = 1)

Wetting Ability: Excellent
